<tbody>
<tr>
<td>Emerald ash borer</td>
<td>6 ml / inch of trunk diameter (at breast height)</td>
</tr>
</tbody>
</table>

Notes and Restrictions:
MERIT 2F may be applied for control of emerald ash borer up to a maximum rate of 0.8 lbs imidacloprid per acre per season.

Recommended applications:
Typically, many of the fine absorptive roots of ash trees are located near the base of the tree, in the upper eight inches of the soil. Apply MERIT 2F near the base of the tree (i.e., within 2-4 ft) to ensure rapid uptake by these absorptive roots. If the product is being soil injected, space injection holes evenly around the tree. If the product is being applied by drenching, remove bark, leaves, mulch, or other organic matter from around the base of the tree prior to application.

Apply the product in sufficient volume of water to ensure proper mixing, but do not apply water in quantities that will cause the soil around the base of the tree to become saturated. The total amount of water used should be sufficient to adequately moisten the soil in the root zone.
